Public Playgrounds must have an accessible route to the play area a least 6’ wide, maximum running slope of 1:20 and maximum cross slope of 1:48. The route to the play area is an accessible route. Minimum width is 6’ and the maximum slope is 1:20. Any running slope over 1:20 or 5% is treated as a ramp with minimum dimension of the transfer space shall be centered accessible routes within the play area, clear floor or ground of 1:20 and maximum cross slope of 1:48.

Within the play area, accessible route must be at least 6’ wide, with a maximum running slope of 1:16, a maximum cross slope of 1:48 and a minimum of 60” overhead clearance. Small play areas of less than 200 square feet in total area, the accessible route must be at least 42”, wide, with a maximum running slope of 1:16, a maximum cross slope of 1:48 and a minimum of 60” overhead clearance.

Wheelchair – accessible platforms require guardrails or handrails. Openings for accessible play components shall be narrowed to 36” or less.

Elevated ramps and accessible platforms require guardrails or handrails. Elevating ramps change in direction, a minimum 60” diameter level landing must be provided both the top and the bottom of each ramp.

Composite play structures that are means of access must meet the following criteria:

1. Public Playgrounds must have accessible transfers up to 8” high and include handrails to aid movement.
2. Within the play area, the accessible route must be at least 6’ wide, with a maximum running slope of 1:16, a maximum cross slope of 1:48 and a minimum of 60” overhead clearance. Small play areas of less than 200 square feet in total area, the accessible route must be at least 42”, wide, with a maximum running slope of 1:16, a maximum cross slope of 1:48 and a minimum of 60” overhead clearance.
3. Within the play area, the accessible route must be at least 42” wide, with a maximum running slope of 1:16, a maximum cross slope of 1:48 and a minimum of 60” overhead clearance. Small play areas of less than 200 square feet in total area, the accessible route must be at least 42”, wide, with a maximum running slope of 1:16, a maximum cross slope of 1:48 and a minimum of 60” overhead clearance.
4. Composite play structures that include ramps and accessible platforms must be at least 6’ wide, with a maximum running slope of 1:16, a maximum cross slope of 1:48 and a minimum of 60” overhead clearance. Small play areas of less than 200 square feet in total area, the accessible route must be at least 42”, wide, with a maximum running slope of 1:16, a maximum cross slope of 1:48 and a minimum of 60” overhead clearance.
5. Composite play structures that include ramps and accessible platforms must be at least 6’ wide, with a maximum running slope of 1:16, a maximum cross slope of 1:48 and a minimum of 60” overhead clearance. Small play areas of less than 200 square feet in total area, the accessible route must be at least 42”, wide, with a maximum running slope of 1:16, a maximum cross slope of 1:48 and a minimum of 60” overhead clearance.
6. Elevator ramps and accessible platforms attached at ramp levels shall have no openings on surface greater than 1/2” and vertical changes in level less than 1/2” or up to 1/2” with a 2:1 beveled edge.
